

Table of contents

Quantum Energy Teleportation

From entanglement and local measurements to Hotta's protocol, rigorous models, experiments, and future applications

Read each section in order. Every title can be opened as a TheoryTrace document.

- Cover
- Copyright
- How to read this book
- Introduction
- Chapter 1: What Quantum Energy Teleportation Is—and Is Not
- Chapter 2: Quantum States, Observables, and Measurements
- Chapter 3: Composite Systems, Entanglement, and Correlations
- Chapter 4: Energy in Quantum Mechanics
- Chapter 5: Locality, Causality, and No-Signaling
- Chapter 6: Vacuum Fluctuations and Ground-State Entanglement
- Chapter 7: The Basic Logic of Hotta's Quantum Energy Teleportation
- Chapter 8: A Minimal Two-Spin QET Model
- Chapter 9: Mathematical Structure of QET Protocols
- Chapter 10: QET in Spin Chains
- Chapter 11: Harmonic Chains and Continuous Variables
- Chapter 12: Quantum Field Theory Viewpoint
- Chapter 13: Passivity, Local Cooling, and Negative Energy Density
- Chapter 14: Information, Entropy, and Energy Gain
- Chapter 15: Thermodynamics of Quantum Energy Teleportation
- Chapter 16: Noise, Imperfections, and Open-System Effects
- Chapter 17: Experimental Platforms and Demonstrations
- Chapter 18: Computing QET Numerically
- Chapter 19: QET, Quantum Communication, and Quantum Networks
- Chapter 20: Possible Applications and Future Directions
- Chapter 21: Open Problems in Quantum Energy Teleportation
- Chapter 22: Building Mastery Through Complete Worked Examples

- Conclusion

Document information

Table of contents

Project	Quantum Energy Teleportation
Document	Primary document
Author	mujirin
Verifier	Not verified
