

Chapter 8: Periodic Functions and Hidden Structure

This section is already in the book plan, but it has not been written fully yet. The book owner can press Generate section to write this part with the language model connected to TheoryTrace.

Section plan:

Explains periodic functions as information encoded globally rather than locally. The chapter connects order finding to the function $f(x) = a^x \bmod N$ and introduces the broader hidden subgroup viewpoint that later helps transfer the same principles to other problems.
